## LaserType Seminar « LASER CLINIC »

Organized by Comgraph in Thailand - July 2005

At INCAMTEC - the mother company - **COMGRAPH** organized a seminar named "**LASER CLINIC**" to present the best Laser software solution available on the market: **LaserType V3**.

The aim was to show the latest version of the product to their customers and also to inform them on how to maintenance laser machines.

2 workgroups focused on these 2 subjects. This seminar was organized in partnership with **Epilog**.

The attendees realized how important it is to have a **good CAD/CAM solution** to get **best quality in design AND in machining**. Plus productivity at the same time as quality is often hard to obtain!  
It can laser both 2D and 3D on Epilog or any other machines.

Other programs available on the market can not perform high quality and complex design. **Piloting laser machines efficiently requires a professional dedicated tool like LaserType**. It is the best option for companies to increase their productivity.
