

PRESS RELEASE

**TypeEdit 2007: First-class software solution
for demanding NC users.**

Lyon, France – December 20th 2006 – Vision numeric releases the latest version of its reference product: TypeEdit 2007. TypeEdit is the leading artistic design and manufacturing software solution for NC users. It is the link between the graphic arts industry and the typographic engraving industry.

TypeEdit 2007 was developed with users' constraints and demands in mind so as to offer better functionalities and results as with each new version. Our double objective with this new version is to increase our customers' productivity while working rapidly and in a pleasant environment. TypeEdit 2007 achieves just that.

Released late 2006, this year's version encompasses so many new functionalities it could not have been out before. Customers and distributors have long awaited this version and will not be disappointed by the final product. With TypeEdit 2007, we offer a version full of new functions and enhancements. The CAD module encompasses new tools to design more rapidly and creatively. It introduces the magic copy, unrivalled 3D texture creation, the revolutionary Chisel to create a 3D effect with a 2D function, etc. For an even greater finishing quality, the CAM module welcomes the new 2D Spiral engraving which suppresses the demarcation mark the tool could leave after a pass. And the rethought TypeView module transforms realistic renderings into real sales help tools.

TypeEdit 2007 is the most accomplished version Vision numeric has released so far. Its capabilities are simply far ahead of competition. It is an extremely powerful and reliable version, built with excellence, quality standards and users' constraints in mind. It is the best proof of our knowledge and seriousness.

Last year, we decided to segment TypeEdit into four distinct packages to respond to ever increasing customization demands from our customers. Today, more than ever, we deliver performance, quality and accuracy. TypeEdit 2007 is truly axed on the productivity gains our clients: engravers, jewelers, mold and sign makers will generate. Capabilities to satisfy each of these sectors have been developed and integrated into this version.

This path towards excellence keeps on guiding our development and establishes TypeEdit as the most reliable artistic CAD/CAM software solution. Along with all Type3 innovative software solutions, TypeEdit reduces time and cost from the product design to the development process. With over 18 years experience, Vision numeric has continually improved its capabilities so as to consistently deliver first-class, productivity-oriented solutions to its customers.

About Vision numeric:

Vision numeric, a French company established in 1988, has assigned itself a special mission from the beginning: to build the bridge between the world of graphical arts and the environment of industrial engraving. Marking, identifying and decorating are the different needs expressed by professionals.

Vision numeric has developed the solution in an environment that focuses on communication through industrial parts. With over 30.000 licenses sold worldwide, Type3 product family is recognized today by professionals as the unavoidable solution, whether they are working in a mechanical or laser environment. www.type3.com
