

A new school partnership for 3DESIGN Thailand, February-March 2005

After this six-day spent at the *Bangkok Gems and Jewelry Fair*, the **Type3** team present in Thailand spent the following week at the **3DESIGN Seminar** at **Srinakarinviroj University** (Sukhumvit 23, Wattana, Bangkok 10110, Thailand). Started February 28th, this 4-day long expert session is just one of the first steps into our new partnerships with the **Srinakarinviroj University**. This agreement strengthens our efforts to build strong relationships with schools throughout the world.

It provides for a year-long course to learn jewelry conception using CAD software including **3DESIGN**, which aims at training a new generation of Thai jewelry designers. Classes will start as soon as May 2005 and more than 100 students have already signed up for it. **Srinakarinviroj University** chose **3DESIGN** to be one of the reference software used to train students in jewelry CAD. During this session, two professors were officially trained onto **3DESIGN** and many more attended classes.

Our team presented **3DESIGN**'s main capabilities and trained professors on specific functions and wizards. The *parametric construction tree*, the *Sweeping and Ring wizards*, and the *Jewelling* function were among the most appreciated features.
